

Direct the SAR 40M to four lagging regions to bring every region to the 65% target

Big Idea Tayseer is above 65% nationally, but four regions sit 2–4 points below target and will not get there for 8–19 months on their own. Concentrating the SAR 40M on them closes the gap.

Decision requested today

Approve the SAR 40M allocation below and a 90-day checkpoint on the Power BI dashboard.

Najran

SAR 15M

Adoption today: 60.9%

Northern Borders

SAR 9M

Adoption today: 62.7%

Al-Baha

SAR 8M

Adoption today: 62.8%

Jazan

SAR 8M

Adoption today: 63.0%

Digital adoption, December 2025 (latest month). Source: Tayseer services dataset, Jan 2022–Dec 2025; Power BI dashboard.

Nationally, Tayseer is on track: adoption crossed 65% in August 2025 and reached 66.2%

66.2%

National digital adoption, December 2025

+12.1 pts

Gained since January 2022 (54.1%)

~3 pts / yr

Steady yearly gain: 55.4 → 58.5 → 61.7 → 64.8% (annual averages)

Digital adoption % = user-weighted average across all regions, services and channels. Source: Tayseer services dataset; Power BI dashboard (KPI + trend).

But 8 of 13 regions are still below 65%, and the gap between leading and lagging regions is widening

8 of 13
regions below 65% in December 2025 (all 13 were below in December 2023)

7.5 → 9.9 pts
Gap between best and worst region, Dec 2022 vs Dec 2025: the leaders are pulling away

Red = below target; grey = at or above target. Same view as the Power BI “Regional Adoption” bar with the 65% reference line (see appendix).

Four regions need 8–19 more months at today's pace; the other four will cross 65% within a quarter

2–4 pts

Bigger gap
Najran, Northern Borders, Al-Baha and Jazan are 2.0–4.1 pts short; the other four are within 0.7 pts.

84%

Most users to convert
≈784 users a month must switch to digital in these four — 84% of the total gap to 65% across all eight regions.

–6 pts

Lower adoption in every channel
Even on the Mobile App, adoption is 70% here vs 76% in leading regions; branch 48% vs 54%. Access isn't the issue — uptake is.

Pace = average monthly gain Jan 2022–Dec 2025 per region. Users to convert = (65% – adoption) × monthly unique users, Dec 2025. Channel figures are 2025 averages.

Of three realistic options, only one targets the regions that won't close the gap on their own

Spread evenly

SAR 5M to each of the 8 below-target regions

- + Simple; every lagging region gets support
- Half the budget goes to 4 regions that will cross 65% within a quarter anyway; Najran gets only 1/8

Closes the regional gap: **Partial**

Concentrate on 4 regions

SAR 40M to the deep-gap four, split by users still to convert (15 / 9 / 8 / 8M)

- + All money goes where the gap won't close by itself; Najran gets the largest share
- Near-target regions get monitoring, not new funding

Closes the regional gap: **Strong**

National channel upgrade

Improve the app and portal for all 13 regions

- + Benefits every user
- National target is already met; leading regions gain most, so the regional gap likely widens

Closes the regional gap: **Weak**

Allocation in Option B is proportional to users still to convert to reach 65% (Dec 2025): Najran 37%, Northern Borders 23%, Al-Baha 20%, Jazan 20%.

Choose Option B: weight the SAR 40M to the four regions with the largest gap

Proposed allocation of the SAR 40M		Expected effect	
Najran	SAR 15M	13 / 13	regions at or above 65%: the four funded regions by month 6 (target), the four near-target regions on their current pace within ~3 months
Northern Borders	SAR 9M	+0.6 pts	national adoption from these four regions alone reaching 65% (66.2% → ~66.8%)
Al-Baha	SAR 8M	≈ SAR 9	saved per transaction moved from branch (SAR 24.1) to mobile app (SAR 15.0)
Jazan	SAR 8M		

Proposed levers assisted-digital onboarding in branches and call centres (lowest-adoption channels), local awareness campaigns, and kiosk-to-app hand-off.

Month-6 target requires +0.7 pts/month in Najran and ~+0.35 pts/month in the other three (vs ~0.23 today). Cost per transaction: 2025 national channel averages.

Approve SAR 40M for Najran, Northern Borders, Al-Baha and Jazan today, with a 90-day checkpoint

Decision today: approve the allocation and the day-90 checkpoint.

Checkpoint pace = monthly gain needed to reach 65% six months after funding, from Dec 2025 levels.

The Power BI dashboard shows the same story: 66.2% nationally, 8 regions below the 65% line

KPI cards
Dec 2025 adoption (66.2%) and number of regions below target (8)

Trend
Monthly national adoption vs the 65% target line

Regional bars
Sorted lowest first; red = below target, grey = on/above; dashed 65% line

Power BI report “Tayseer - Digital Adoption” (My workspace), semantic model “Tayseer Digital Adoption”. Use live for Q&A.

Every number in the story traces back to one user-weighted measure on one dataset

Data	Tayseer services dataset: 24,960 rows, Jan 2022–Dec 2025, 13 regions × 8 service categories × 5 channels (synthetic, course-provided)
Digital Adoption %	$\Sigma(\text{digital_adoption_pct} \times \text{unique_users}) \div \Sigma \text{unique_users}$ — the same formula as the Tableau lab; built as a DAX measure in Power BI
Snapshot	December 2025 (latest month) for regional status; 2025 full-year averages for channel and cost comparisons
Months to 65%	Gap to 65% ÷ the region's average monthly gain, Jan 2022–Dec 2025 (linear pace)
Allocation weights	Users still to convert = (65% – adoption) × Dec 2025 monthly unique users; SAR 40M split pro rata, rounded to whole millions
Limitations	Single-month snapshots are noisy; the same four regions are also the bottom four on 2025 full-year averages. Pace and expected effects are targets, not forecasts

Likely questions, and how each answer bridges back to the decision

Why not fund all eight below-target regions?

Asir, Tabuk, Hail and Al-Jouf are within 0.7 pts and cross 65% within ~3 months at today's pace. Funding them buys little; we keep them on the dashboard watch-list.

Is December 2025 just a bad month?

No — on 2025 full-year averages the same four regions are the bottom four (60.4–61.6%). The ranking holds.

Your numbers look wrong.

The measure is user-weighted and matches the dashboard. Even if one region moves by a point, the deep-gap four stay the priority.

What if a region doesn't respond?

The day-90 checkpoint: a region below its required pace has its remaining funds moved to the regions that are on track.
